H / Q training diagnostics
Gradient norms are pre-clip; FM error is not video quality.
Feedback often dominates the C gradient before clipping
Weighted verifier / paired C gradient norm
H: median 60.3x
Q: median 29.2x
Held-out denoising error after interface adaptation (lower is better)
FM error change from step 64 (%)
H, sigma=0.25
H, sigma=0.65
H, sigma=0.95
Q, sigma=0.25
Q, sigma=0.65
Q, sigma=0.95
